Oppsummering Midt-Norge

Lakselussituasjonen er forbedret i mange områder.

Noen soner med tidlig vårutsett har mer lakselus første høst i sjø og andre vinter i sjø

Bekjempelse av lakselus i en lengre periode i vintersesongen

Gjentatte behandlinger mot lakselus har en pris

En ser stor variasjon i helse- og velferdsutfordringer knyttet til avlusning mellom enkeltlokaliteter.

Underliggende helseutfordringer har stor betydning for utfallet av lakselusbehandling.
