

International Marine Ingredients Conference Norway

22. - 24. September, 2013, Oslo

From science to industrial production

The first International Marine Ingredients Conference
MIC2010 was a great success.

The second conference MIC 2013 will follow up by
illustrating that the marine ingredients industry is now well
established, being one of three main pillars for value
added production from fisheries and aquaculture.

MIC2013 aims to be an attractive meeting place for industrial players,
scientists and authorities wanting to take part in this sustainable industrial
growth of marine ingredients.

We are proud to present a programme combining science, industry
and business development policy.
